## Current Position

**Professor of Evolutionary Ecology** (Section of Animal Biology, Department of Biology, University of Patras)

## Research Interests & Expertise

- My research focuses on the interplay between ecological and evolutionary processes. Specifically, my research interests embrace the study of the evolutionary ecology of terrestrial animals, focusing in speciation and diversification processes by investigating population genetics & molecular phylogenetics, and the evolution of morphological, ecological, behavioral and physiological traits and adaptations.
- Furthermore, I am strongly interested in the processes shaping the assemblages of insular biotas, and affecting biodiversity patterns of terrestrial animals, using up-to-date approaches of ecological & historical biogeography.
- I have ample experience in field ecological research. Since 1987 I have participated in numerous collecting expeditions in mainland Greece and in more than 80 islands and islets of the Aegean and Ionian Sea.
- I have high expertise in the assembly and analysis of molecular, ecological and morphological data.
